

FUN FACT

Mans best friend has evolved to understand human laughter and can smell their humans from 11 miles away! Dogs have a sense of time; they know the difference between an hour and five minutes. If conditioned, they can even predict when their favorite dog walker is coming to take them for a walk! Dogs have a branch of nerves in their ears and when you rub/massage them it releases endorphins, making them extremely relaxed with a type of natural high!

TRAINING TIPS

When it comes to training a pet, almost everyone will go right to thinking about training a dog. But what about training a cat? Surely they must be harder to train or something, right? Actually, cats can be just as easily trained as dogs can!

Two tricks that cats are great at that most people don't know about are "target" and "station" commands. "Target" is getting a cat to touch something, usually the end of a stick, while "station" is getting a cat to go somewhere specific. Both of these can be helpful leading your cat, which can help for things like administering medication. If you want to see these in action, they're commonly used with big cats by zookeepers as well!

HEALTH & SAFETY

Unfortunately for our furry friends, this holiday can be very distressing. Fireworks are upsetting, the sounds can even be painful for them. Do you have a TV or radio to drown out the sounds? Maybe use medication for the stress? We recommend using an all-natural stress relief remedy ([link below](#)).
